NEW Painted Interior Finish Available in White

Painting windows and doors on the job site or scheduling off-site finishing can be tedious and time-consuming. Having windows and doors painted after delivery adds time and cost to a project. It often requires removing hardware and leaving the window or door open while the paint dries. To help solve these issues, Marvin® now offers a Painted Interior Finish option. The white Painted Interior Finish option is available on all Marvin pine windows and doors with a wood or clad exterior.

QUALITY AND DURABILITY

Marvin's integrated prime and paint system is designed to work together for exceptional durability and paint adhesion. Marvin applies a coat of primer and a separate coat of paint to each individual wood piece. The window or door is then assembled. This process ensures that the primer and paint is applied evenly, creating a high quality, consistent finish. The natural features and benefits of wood including wood grain will be present, radiating the warmth and character of real wood. The Painted Interior Finish meets or exceeds WDMA TM 14-09 standards, an organization that sets test requirements for factory-applied pigmented coatings for interior wood millwork.

CONVENIENT

Painting windows and doors on the job site or scheduling off-site finishing can be tedious and time-consuming. It often requires removing hardware and leaving the window or door open while the paint dries. Having windows and doors painted after delivery can also add time and cost to a project. Marvin makes it easy to order white Painted Interior Finish. It is available on the interior of all Marvin pine products along with all interior wood accessories.

ENVIRONMENTALLY FRIENDLY

Painted Interior Finish also has environmental benefits. The water based enamel primer and paint has Zero Volatile Hazardous Air Pollutants (VHAPs) and low Volatile Organic Compounds (VOCs). During the manufacturing process, state of the art paint spray equipment is used to minimize any paint overspray or waste. VOCs are captured and filtered to minimize impact to the environment. The Painted Interior Finish option also eliminates off gassing at the job site and provides improved air quality.
